## UX/UI Designer | Front-End Developer

Las Vegas Bar Restaurant

15/03/2024 – 28/04/2024  
Valencia, Venezuela

The client wanted to create a website where customers could browse their menu and explore the various dishes available at the restaurant.

My role included:

- Design the restaurant menu layout and user experience using Figma, ensuring a visually appealing and user-friendly interface.
- Conduct a professional photoshoot of the dishes, incorporating high-quality images into the menu to enhance customer engagement.
- Create the restaurant's website design with Figma, aligning the aesthetic with the restaurant's branding and theme.
- Develop the website using Next.js for fast, dynamic rendering, and styled it with Tailwind CSS.
- Implement scroll-based animations using pure CSS to improve performance and ensure smooth transitions, avoiding the use of third-party libraries for a more lightweight solution.

## UX/UI Designer | Full-Stack Developer

StreamPro

13/04/2024 – 24/07/2024  
Valencia, Venezuela

The client requested to adapt their existing website into a mobile app compatible with both Android and TV platforms, enabling users to register, log in, and access a catalog of movies, series, and more.

My role was:

- Develop the app using React Native and Expo, ensuring smooth multiplatform compatibility across Android and TV.
- Build a robust API with Node.js and Express to connect to the client's SQL database for seamless data retrieval and management.
- Implement a secure authentication workflow using JWT tokens to handle user login and session management.
- Design and optimize API routes for efficient data fetching and interaction between the frontend and backend.
- Integrate caching mechanisms to improve app performance by minimizing repeated data requests and speeding up content delivery.
